LED

ARCHITECTURAL TROFFER

UNIVERSAL VOLTAGE 100-277

GENERAL DESCRIPTION

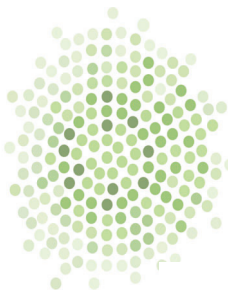

GUSCO Energy's LED Architectural Troffer is made from injection molded ABS plastic, making it highly durable. The ABS plastic frame has some advantages from a light output standpoint. The curved housing has small ridges, which help reflect light out of the troffer, minimizing the cave effect. Since this highly functional troffer is made of high grade ABS plastic, it is very economical. But, don't let the price fool you, this fixture uses the latest technology and looks great!

STRUCTURE, MATERIALS & FEATURES

GUSCO Energy's Architectural Troffer is both UL and DLC premium listed. THE ABS housing and frosted ribbed lens give it a high end look. Using high quality lens and driver create smooth, non flickering 0-10v dimming.

APPLICATION

GUSCO Energy's Architectural Troffers are perfect for educational facilities, offices, hallways, conference rooms and cafeterias.
